**Performance Test**

| | |
|---|---|
| Date | 28 October 2026 |
| Team ID | EN25CS3010362 |
| Project Name | Formula 1 Race Intelligence Dashboard |
| Maximum Marks | As per SkillWallet assessment rubric |

**Project Performance Testing:**

The project team shall fill the following information in the Project performance testing template.

| S.No. | Parameter | Screenshot / Values |
|---|---|---|
| 1. | 1. Data Rendered | NOT APPLICABLE – The supplied project evidence documents a Tableau dashboard and Flask website. No Snowflake tables, warehouse, or Snowflake query results were provided. |
| 2. | 2. Data Preprocessing & Quality | NOT VERIFIED – No Snowflake SQL, null-check results, duplicate-check results, standardization logs, or data-quality report was supplied. Do not report invented counts. |
| 3. | 3. New Fields Created | NOT APPLICABLE / NOT VERIFIED – No Snowflake schema or SQL transformation scripts were supplied. Tableau dashboard metrics are not evidence of Snowflake-created fields. |
| 4. | 4. Filter Efficiency Test | NOT APPLICABLE – No Snowflake query execution plans or timings were supplied. Tableau dashboard filters are documented in the separate Tableau performance test. |
| 5. | 5. Dashboard & Visualization Testing | The project has 9 identifiable principal Tableau visualizations. This is Tableau evidence, not Snowflake visualization testing. No Snowflake-connected dashboard evidence was provided. |
| 6 | 6. Query History | NOT AVAILABLE – No Snowflake query history, query IDs, or execution-time records were supplied. Highest execution time cannot be identified without query history. |

# Evidence note

This template is completed transparently using the materials supplied. The current project evidence identifies Tableau Public, a Flask website, and a GitHub repository; it does not establish that Snowflake was implemented. If Snowflake was used separately, provide the SQL scripts, table details, query history, and data-quality outputs so this section can be updated accurately.
