Demonstration of Proposed Features

Date	28 October 2026
Team ID	EN25CS3010362
Project Name	Formula 1 Race Intelligence Dashboard

Demonstration of Proposed Features

Statuses are based on the published dashboard screenshot, project links, and project details provided. “Partial / validation required” is used where the view exists but its calculation or interpretation should be checked.

S.No	Feature Name	Description	Status	Demonstrated	Remarks
1	KPI summary cards	Display high-level dataset coverage indicators.	Implemented	Yes	Screenshot shows 6,464 race records, 17 seasons, and 24 circuits.
2	Driver Performance Leaderboard	Compare driver points/performance in a ranked view.	Implemented	Yes	Driver leaderboard is visible in the dashboard.
3	Tyre Compound Usage	Show the distribution of tyre compounds.	Implemented	Yes	Visible proportions: Soft 31.52%, Medium 30.78%, Hard 30.36%, Intermediate 7.34%.
4	Team Performance Ranking	Compare team performance.	Implemented	Yes	Team ranking view is visible.
5	Podium Achievements	Show podium-related achievements by driver/team.	Partial / validation required	Yes	View exists; a null indicator is visible, so validate data/aggregation before citing exact totals.
6	Driver Reliability / DNF Reasons	Explore retirement reasons such as mechanical, gearbox, hydraulics, and engine.	Implemented	Yes	Reliability and DNF reason view/filter is visible.
7	Host Country Map	Map locations associated with race-hosting countries/locations.	Implemented	Yes	Map is present; it represents host locations, not driver nationality.
8	Completion Rate Trend	Show completion rate across the selected time dimension.	Partial / validation required	Yes	Chart exists, but axis/aggregation should be checked before interpreting the trend.
9	Season-wise Team Championship	Compare team performance across seasons.	Implemented	Yes	Stacked bar view is visible.
10	Tyre Usage by Season	Compare tyre usage across seasons.	Partial / validation required	Yes	Chart exists; confirm measure, axis, and aggregation in Tableau.
11	Dashboard filters	Filter by season, team, tyre compound, and	Implemented	Yes	Filters are visible in the screenshot; re-test live interaction

		DNF reason.			before demo.
12	Tableau Story	Present selected analysis in a guided sequence.	Implemented	Yes	Published Tableau Story URL is available.
13	Flask project website	Provide a landing page with links to Dashboard and Story.	Implemented	Yes	Live Render website URL is available.

Feature Implementation Summary

Metric	Count / Result
Total features listed in this report	13
Features marked Implemented	9
Features marked Partial / validation required	4
Features marked Pending	0
Features marked demonstrated from available evidence	13 (views/links are present; re-test live interactions before presenting)
Overall implementation rate (strict: Implemented only)	69.2% (9 / 13)
Implementation including partial features	100% have a visible/identified implementation; 4 require validation

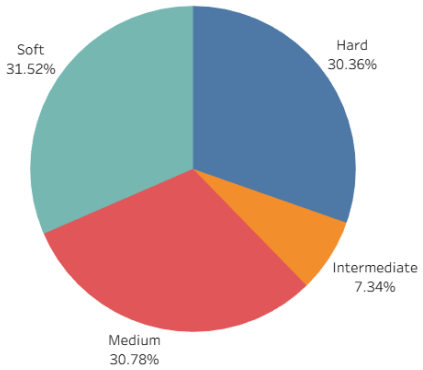

These counts are based on the feature inventory above, not on an independent test run of the live application. Do not present them as formal QA results unless each feature is re-tested.

Visualization Evidence

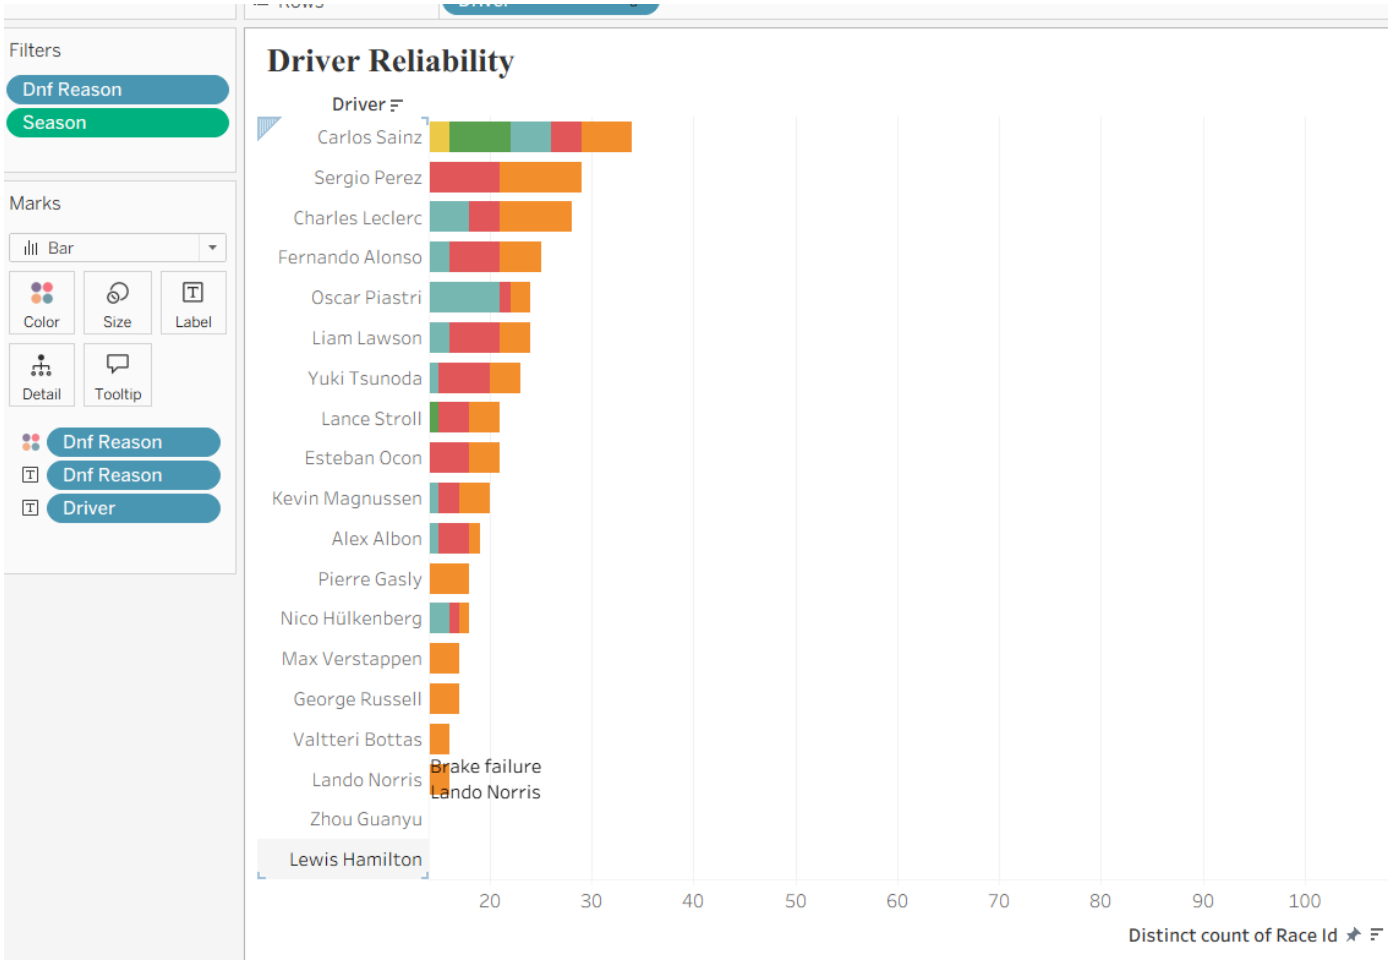

Driver Performance Leaderboard.

Tyre Compound Usage

Tyre Compound Usage.

Driver Reliability / DNF Reason view.
